

CJX Aegis Incident Report

Company: Freelancer Laptop

Title: Email Virus Infection from Phishing

Summary:

A freelancer opened an email with a hidden executable that quietly installed a remote control agent.

Triggered Alerts:

malware_injection, unauthorized_access, suspicious_data_transfer

Impact:

The attacker gained full control: installed keylogger, activated webcam, accessed saved credentials. Spreading laterally to nearby unsecured networks.

Action Plan:

CJX Agent isolated the laptop, shut down command channels, purged the RAT payload, enabled safe boot protocols and resecured local data vault.
